PROFESSIONAL SUMMARY

Frontend-focused Full Stack Engineer with 4+ years of experience building scalable, high-performance web applications used by 10,000+ users. Deep expertise in React, Next.js, and TypeScript, with solid backend proficiency in Node.js, REST API design, and relational database schema design. Designed scalable frontend architecture and optimised high-throughput data pipelines handling 10L+ data points, achieving a 45% reduction in load time. Comfortable owning features end-to-end — from API design to pixel-perfect UI — with a strong bias for performance, clean code, and shipping fast.

TECHNICAL SKILLS

Frontend: React, Next.js (SSR/SSG), Nuxt.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Redux, ShadcnUI

Backend: Node.js, Express.js, NestJS, REST API design, JWT Authentication, RBAC, WebSockets

Databases: PostgreSQL, MongoDB, Query optimisation, Relational schema design, Spatial indexing

Tooling: Git, GitHub, Webpack, Vite, Docker (basic), Postman, Figma

PROFESSIONAL EXPERIENCE

Software Engineer (Frontend → Full Stack)

Apr 2022 – Present

TalkingLands • Bengaluru, India

- Joined as a frontend engineer and progressively took on full-stack ownership — designed relational database schema with indexing strategy in PostgreSQL and built RESTful API endpoints in Node.js/Express, optimising critical API response times to under 100 ms.
- Designed scalable frontend architecture and led development of a production geospatial platform — React, Next.js, TypeScript, MapLibre GL — serving 10,000+ users; reduced map rendering load time by 45% (3 s → 1.6 s) via tile-based clustering, lazy fetching, and WebGL layer optimisation.
- Built an interactive plot-management toolset (draw, measure, split, merge polygons) handling 10L+ geospatial data points with smooth 60 fps rendering through optimised GeoJSON pipelines.
- Developed a Role-Based Access Control (RBAC) admin portal with fine-grained permission management across multiple user tiers; zero unauthorized access incidents post-launch.
- Resolved critical production incidents with root-cause analysis and hotfixes, maintaining 99.5%+ uptime; documented runbooks for recurring issue patterns.
- Participated in Agile sprints, conducted peer code reviews, and shared React performance best-practices with junior engineers.

Full Stack Intern

Jul 2021 – Aug 2021

TequedLabs • Remote

- Built MERN-stack internal tools to automate manual data workflows, cutting processing time by ~30%.
- Developed a full-featured eCommerce app (product catalogue, cart, checkout) using React, Node.js, Express, and MongoDB with third-party payment API integration.

PROJECTS

VidVerse | Next.js, TypeScript, React Query, Tailwind CSS

- Video discovery platform with Next.js SSR for SEO-optimised pages; debounced search cut API calls by 60%. Drag-and-drop playlist UI with optimistic updates and sub-200 ms interactions.

MovieMentum | React, TypeScript, TMDb API, Framer Motion

- Movie browsing app with advanced filtering, lazy-loaded images via Next/Image (35% bundle reduction), skeleton loaders, and smooth page-transition animations.

EDUCATION

Bachelor of Engineering — Computer Science & Engineering

2018 – 2022

Visvesvaraya Technological University, Karnataka
